

## IRU Contribution to Higher Education and Research in Regional Australia

The impact of higher education on the residents of Australia's regions is an issue of growing policy relevance and importance for the Australian Government, particularly in health sciences. As announced in the 2018 Budget, the Government will provide additional funding for building the capability of Australia's rural medical practitioner workforce (including the new Murray-Darling Medical Schools Network), expand the Rural Health Multidisciplinary Training Program, and provide additional CSPs for sub-bachelor or enabling courses, bachelor degree courses through regional study hubs and improved regional students' access to Youth Allowance. Additionally, the priorities of the Medical Research Future Fund (MRFF) include regional health and research translation. It is therefore useful to know which universities operate from the regions and their relative contributions.

The IRU members are major players for regional students and regional areas:

- we teach 19% of the nation's regional and 29% of the nation's remote students;
- we teach 17% of the nation's students taught from regional based campuses;
- students taught from regional based campuses increased by 33,000 over the 2011-2016 period, including an increase of 6,400 at IRU members;
- two of our members earn 20% of the research income generated by the 13 universities based primarily in regional areas.

Within the health sciences, the IRU's regional presence is stronger:

- we teach 26% of the nation's health students taught from regional based campuses;
- students taught from regional based campuses increased by 20,400 over the 2011-2016 period, including an increase of 5,000 at IRU members; and
- we teach roughly similar proportions of the nation's health students in regional based campuses at the doctoral-level (26%), postgraduate coursework (31%) and bachelor-level (25%).

The attached IRU briefing paper sets out the three measures with supporting data.

September 2018

## Providing Higher Education and Research in regions and for residents of the regions

This paper outlines three measures of the quantum of research and teaching undertaken from regional Australia and for residents of regional Australia. It shows the contribution of IRU members and of universities from the other groupings. The three are:

1. Teaching of students from regional Australia
2. Teaching from regional Australia
3. Research from regional Australia

The first measure shows where people from regional Australia enrol; the second and third show the level of higher education and research activity delivered from regional Australia.

Higher education achievement tends to be low in regional Australia, with usually one university providing campus-based teaching and research. There are similar issues for IRU members targeting outer metropolitan areas in state capitals. The measures below do not attempt to capture that activity.

### Teaching of students from regional Australia

This measure considers a domestic undergraduate student's permanent home address in determining regional or remote status. In this briefing, we report the ASGS data. ASGS is based on the ARIA+ measure of remoteness, which classifies locations based on their relative proximity to service centres (towns and cities) of various sizes.

Tables 1 to 3 show 2016 domestic undergraduate enrolments, setting out the number of students, their distribution among IRU and other university groups, and their proportion of all domestic undergraduate students. IRU members enrol 19% of the nation's regional and 29% of the nation's remote students (compared to 16% and 27%, respectively, under the former MCEETYA regional definition). Within the IRU the proportion of students classified as regional or remote ranges from 4% at Western Sydney University to 88% at James Cook University. Data for all universities is in Appendix 1.

**Table 1: Number of Regional and Remote Domestic Undergraduate students 2016**

## Teaching from regional Australia

This measure considers teaching done from regional Australia, rather than the origin of students. It includes all students undergraduate and postgraduate, Australian and international.

'Regional' is defined as any campus outside of the metropolitan regions of Sydney, Melbourne, Brisbane, Adelaide and Perth and the Australian Capital Territory. This definition therefore includes as 'regional' some major centres outside capital cities that would not be considered regional in the 2011 ASGS definition, including the Gold Coast, Sunshine Coast, central Newcastle, Wollongong, Geelong and Mandurah.

On this measure 26% of IRU member students are taught from regional campuses, 67% from state and national capital city campuses, with the remaining 7% in overseas campuses (see Table 6). There is considerable variance, with the proportion of regionally taught students ranging from 0% at Western Sydney University to 89% of the cohort at Charles Darwin University. The proportion of students taught at IRU member regional campuses has not increased since 2011.

The IRU is the base for 17% of Australia's regionally taught students, the RUN 32% and the other universities 48% (almost all enrolled in five universities: Tasmania, Charles Sturt, Wollongong, Newcastle and Deakin). Across the entire sector, students taught from regional based campuses increased by 33,000 over the 2011-2016 period (12% increase). This included an increase of 6,400 in regional campus delivery at IRU members over this period (14% increase). This compared to a 14,400 increase at RUN (17%) and a 17,400 increase at unaligned universities (13%). Regional campus delivery declined by 300 at the ATN (-13%) and 5,000 at the Group of Eight (-59%) (due to Gippsland switching to Federation University) over this period (see Table 7).

2016 data for all universities is at Appendix 2.

## Research from regional Australia

Regional research metrics are harder to determine as data is not reported by researcher location. Tables 10 to 12 include research income for 13 universities whose primary research effort is conducted from regional areas. This captures all research income, irrespective of if it has an explicitly local focus or not. The 13 regional universities include two IRU members (Charles Darwin University and James Cook University), all six RUN members and five unaligned universities. Despite having significant regional research presence, Griffith and Deakin are excluded given their substantial research footprints in Brisbane and Melbourne respectively.

The research income from the 13 regional universities is 12% of national research income, providing a crude guide to the proportion of research not based in the state capitals and Canberra. The two IRU members earn 20% of the research income generated by the 13 universities.

## Teaching health students from regional Australia

This measure considers health student teaching done from regional Australia in undergraduate and postgraduate, Australian and international courses. 'Regional' is defined as any campus located location outside of the greater metropolitan regions of Sydney, Melbourne, Brisbane, Adelaide and Perth and the Australian Capital Territory.

On this measure 39% of IRU member students in health courses are taught from regional campuses, 59% from state and national capital city campuses, with the remaining 2% in overseas campuses (see Table 15). This a higher regional provision compared to non-health courses, of which 22% of IRU member students are taught from regional campuses.

The IRU is the base for 26% of Australia's regionally taught students in health courses, the RUN 25% and the other universities 49%. This is a considerably higher proportion of regional delivery compared to non-health courses, of which IRU members account for 15%, the RUN 34% and other universities 52%. Health students taught from regional based campuses increased by 20,400 over the 2011-2016 period, including an increase of 5,000 at IRU members. This compared with a 6,600 increase at RUN, a 10,300 increase at unaligned universities, flat enrolments at ATN and declines of 1,400 at the Group of Eight.

The IRU's share of Australia's regionally taught students in health courses does not vary considerably by broad level of course, including doctoral-level (26%), postgraduate coursework (31%) and bachelor-level students (25%). The only level of course where IRU does not have a strong presence is in the sub-bachelor health courses, of which the IRU is the base for 3% of regional campus delivery. This small segment (1% of all health students, 2% of regional and remote) is dominated by the University of Tasmania, which teaches 62% of all of Australia's students in sub-bachelor health courses and 87% of Australia's regionally taught students these courses.

## Appendix 2 – Regional Students by Campus Location

The tables below include all students by their campus location, for:

- Total students by University by campus location;
- A university's student enrolments by campus location as a proportion of the national total; and
- Students by campus location as a proportion of the university's total enrolment.

'Regional' in the tables below is defined as being any area in Australia outside of the greater metropolitan areas of Sydney, Melbourne, Brisbane, Perth and Adelaide and the Australian Capital Territory.

<b>Total Students by Campus Location</b>	<b>Major Cities</b>	<b>Regional &amp; Remote</b>	<b>Overseas</b>	<b>Total</b>
<b>IRU</b>				
Charles Darwin University	1,240	10,576	9	11,825
